Itential + Amartus

Delivering the Promise of Programmable, Dynamic Networks

Providing global customers with intelligent network solutions, our partnership delivers end-to-end network automation, reduces manual tasks and realizes innovation faster.

Overview

In alliance with Amartus, Itential leverages the fusion of expert software development, technical consultancy, and network expertise from our partnership to enhance the Itential solution portfolio, focusing on improving the efficiency of network operations. Together, this collaboration provides global customers with an intelligent network solution that delivers end-to-end network automation and drives shorter time to revenue.

What We Deliver

For over 15 years, Amartus has been solving network issues by designing, developing, and integrating service orchestration, network automation, and OSS/BSS solutions. As a trusted innovation partner, Amartus supports Itential with the design and development of its Network Intelligent Automation Solution, core platform development, and delivery of its integration expertise to end customers.

Itential products are built with today's complex, heterogenous networks in mind. From cloud-based networks to data center networks to distributed WANs – Itential includes the features that you need for even the most difficult, large enterprise and service provider class network automation projects.

The Itential Network Automation solution includes:

Low-Code, Drag-and-Drop Interface: Itential can be used by developers and network engineers alike, regardless of network engineering or coding skills. Its intuitive low-code interface and built-in network intelligence allows everyone on your team to contribute to your network automation goals.

Intent-Based Network API: Itential simplifies your network automation ecosystem by consolidating the functions of network facing tools into a single, aggregated network API. This saves time and money by providing systems, such as ServiceNow, BMC Remedy, and SolarWinds NPM a single integration point for network automation tasks.

Multi-Domain: Itential is purpose-built for today's complex, heterogenous networks. From cloud-based networks to data center networks and from NFV to distributed WANs – Itential includes the features that you need for even the most complex, large enterprise and service provider class network automation projects.

Network Intelligence: : Itential's platform supports automating your current operations and future closed-loop logic, enabling a limitless array of network automation capabilities. The intuitive user interface enables engineers of all skill levels to participate in creating, visualizing, building and executing automations by providing prebuilt components which can be easily configured around your organization's objectives.

Why Itential + Amartus?

Our network automation solution for physical and virtual networks provides an end-to-end and closed-loop automation capabilities while seamlessly connecting to your systems. By leveraging our partnership with Amartus, we accelerate our customers' journey towards automation while delivering the highest quality of software based on open APIs and the latest industry standards to deliver robust, secure and easily-scalable solutions. Combined, we are:

- In use within 6 of the 10 largest service providers in the world
- Used by 3 of the top 5 US financial service institutions
- Trusted by the US military
- Exhaustive pre- and post-check capabilities to ensure error free operational changes

"The industry is on the cusp of an automation revolution in networking, and in order to realize the benefits of this innovation, companies must embrace orchestration and virtualization technologies. By partnering with Itential, Amartus contributes to the development of a potent automation solution that helps enterprises and service providers transit from traditional networks to nimble, software-centric networking."
- Liam Twomey, VP of Sales and Marketing at Amartus

"Many of our customers are struggling to meet the demands on their network brought by the changing landscape in the industry. Itential's focus has been to build a platform that can not only get started but grow with them as they take on steadily more complex objectives Our partnership with Amartus is key to that success."
- Chris Wade, CTO and Co-founder at Itential

About Itential

Itential is committed to building world-class products that accelerate the move toward software-driven networks and Itential provides powerful network automation software to companies worldwide, from Fortune 500 telecommunications and financial service companies to enterprises of all sizes. We are committed to building world-class products that accelerate the move toward software-driven networks and next generation, agile network operations. We are exclusively focused on delivering network automation solutions that help our customers realize their vision of digital transformation. Our solutions leverage the latest thinking, open standards, open architectures, partners and best practices to drive network operations and maximize the impact of automation.
